

# Advanced Features Overview

**Version:** 2.8 | **Last Updated:** March 2023

## Custom Workflows

Create custom workflow states beyond the default To Do / In Progress / Done. Go to Settings → Workflows and add states like 'In Review', 'Blocked', or 'Deployed'. Define transition rules to enforce your process.

## Advanced Filtering

Use filters to find exactly what you need. Combine multiple criteria: assignee, labels, due date, sprint. Save common filters for quick access. Syntax: 'assignee:me labels:bug sprint:current'.

## Timeline View (Coming Q2 2023)

We're excited to announce Timeline view is coming in Q2 2023! This Gantt-style view will help you visualize project dependencies and deadlines. Stay tuned for the beta release.

## Bulk Actions

Select multiple tasks to perform bulk operations: reassign, change labels, move to sprint, or update status. Shift-click to select a range or Cmd/Ctrl-click for individual selection.

## API Access

Enterprise and Pro plans include API access. Generate an API key from Settings → API. Full REST API documentation available at [docs.clearpath.io/api](https://docs.clearpath.io/api).
