

# Engineering Team Structure

## Engineering Team Structure

Updated: January 2024

### Team Overview

The Engineering team consists of 18 people across 4 sub-teams: Frontend, Backend, Mobile, and Platform/DevOps. We work in 2-week sprints with sprint planning on Mondays and demos/retros on Fridays.

Team	Lead	Members	Focus
Frontend	Alex Chen	5	React app, UI components, state management
Backend	Jordan Kim	6	API, database, integrations, webhooks
Mobile	Sam Patel	3	iOS and Android apps
Platform	Taylor Johnson	3	Infrastructure, CI/CD, monitoring, security

### Cross-Team Collaboration

Teams collaborate through weekly syncs, shared Slack channels, and quarterly planning sessions. Major features require representatives from all teams in the kickoff.
